

Ongoing DevOps

nClouds offers a team of DevOps engineers for planned and ad-hoc tasks. Weekly meetings will cover status updates and the planning of new work.

Includes

- DevOps Team
- Project Management
- Application improvements
- Infrastructure maintenance and automation
- CI/CD pipeline maintenance and improvements
- Implementation of new workloads and processes

Benefits of **Ongoing DevOps**

Easily shift your priorities

You can choose what gets worked on and when without being limited to a specific project's scope.

Decide how to use the hours

With a monthly pool of hours, you get to decide how much time is to be spent on each task. Work can be parallelized and tracked independently.

POC

Use the time to explore new solutions and implementations.

Troubleshooting

Address ongoing issues in live troubleshooting sessions.

Advisory

Don't guess on your next implementation. We become a part of your team so that any new workloads are always following best practices.
